

This slide show presentation shows you how important it is to address mail using the US Postal Service standards. I hope you enjoy the presentation.

The background of the slide is a solid blue color. Overlaid on this background is a perspective grid pattern. The grid consists of a series of horizontal lines and a series of vertical lines that converge towards the top and bottom edges of the slide, creating a 3D effect of a floor or ceiling receding into the distance. The grid is centered horizontally and occupies most of the vertical space.

**To view this slide presentation
at your own pace, just click (or
press) the left mouse button each
time you are ready to continue.**

Objectives:

**#1 - To describe the
standardized format.**

Objectives:

#2 - To explain WHY it is important to address mail using the standardized format prescribed by the US Postal Service.

Objectives:

#3 - To explain WHY it is important to make sure the address is accurate.

**The recommended address form
is described in Publication 28,
“Postal Addressing Standards,”
published by the US Postal Service**

**SERVICE ASSOCIATES

WASHINGTON DC 12345-
6789**

Basic rules for addressing include:

- **use typewriter or printer**
- **print in dark ink on a light background**
- **use uppercase letters (preferably)**
- **use a font where letters do not touch**
- **omit all punctuation (except hyphen in ZIP+4)**

Every mail piece you create competes with over 550 million other pieces of mail every evening.

The US Postal Service uses equipment designed to automate mail processing.

For example, Optical Character Readers (OCR) are used to read the last two lines of the add

**translate the information into bar code, then
print the bar code on the lower right edge of
the mail piece.**

Delivery of mail pieces with incorrect addresses

or poor address formats will be delayed, or

worse, not be delivered and returned to you.

Delivery of mail pieces with incorrect addresses

or poor address formats will be delayed, or

worse, not be delivered and returned to you.

In short, correct addressing and using the standardized format CAN SAVE TIME & MONEY.

**Accurate addressing
involves more than you
might think!**

Whenever you address a mail piece, stop and ask yourself a few questions.

- Is the city, state, and zip code on the same line?**
- Is the state represented by the proper two-letter state abbreviation?**
- Is the ZIP code correct?**

So what?

Did I hear you say: “So what?”

Anyone who uses a standard keyboard knows that the “2” and the “9” are normally typed with the SAME finger BUT with different hands.

**What happens IF the
ZIP code was supposed
to be 22202 (Arlington VA)
but instead the wrong
hand got in the way
for just one digit and
keyed 92202.**

Instead of delivering the letter to Arlington

the letter might be delivered to a post office somewhere in California.

Now look at the delivery address -- the second line from the bottom. Ask yourself a few more questions.

- Is the street address, post office box, or rural route correct?**
- Does the delivery address need directionals? (N=north, S=south, E=east, W=west, or a combination) For example:**

101 N 3RD ST SE

- Are the abbreviations correct, i.e., ST (street), AVE (avenue), DR (drive), LN (lane), etc.**

Accurate directionals are very important! If an address specifies “North” 3rd Street instead of “South” 3rd Street, the mail piece could be carried by the wrong carrier.

By the time the carrier returns to the post office and the right carrier gets the mail piece, a delivery day is lost.

**A few addressing points
should be *stressed*:**

- Use uppercase letters**
- Eliminate punctuation**
- Type or print addresses --**

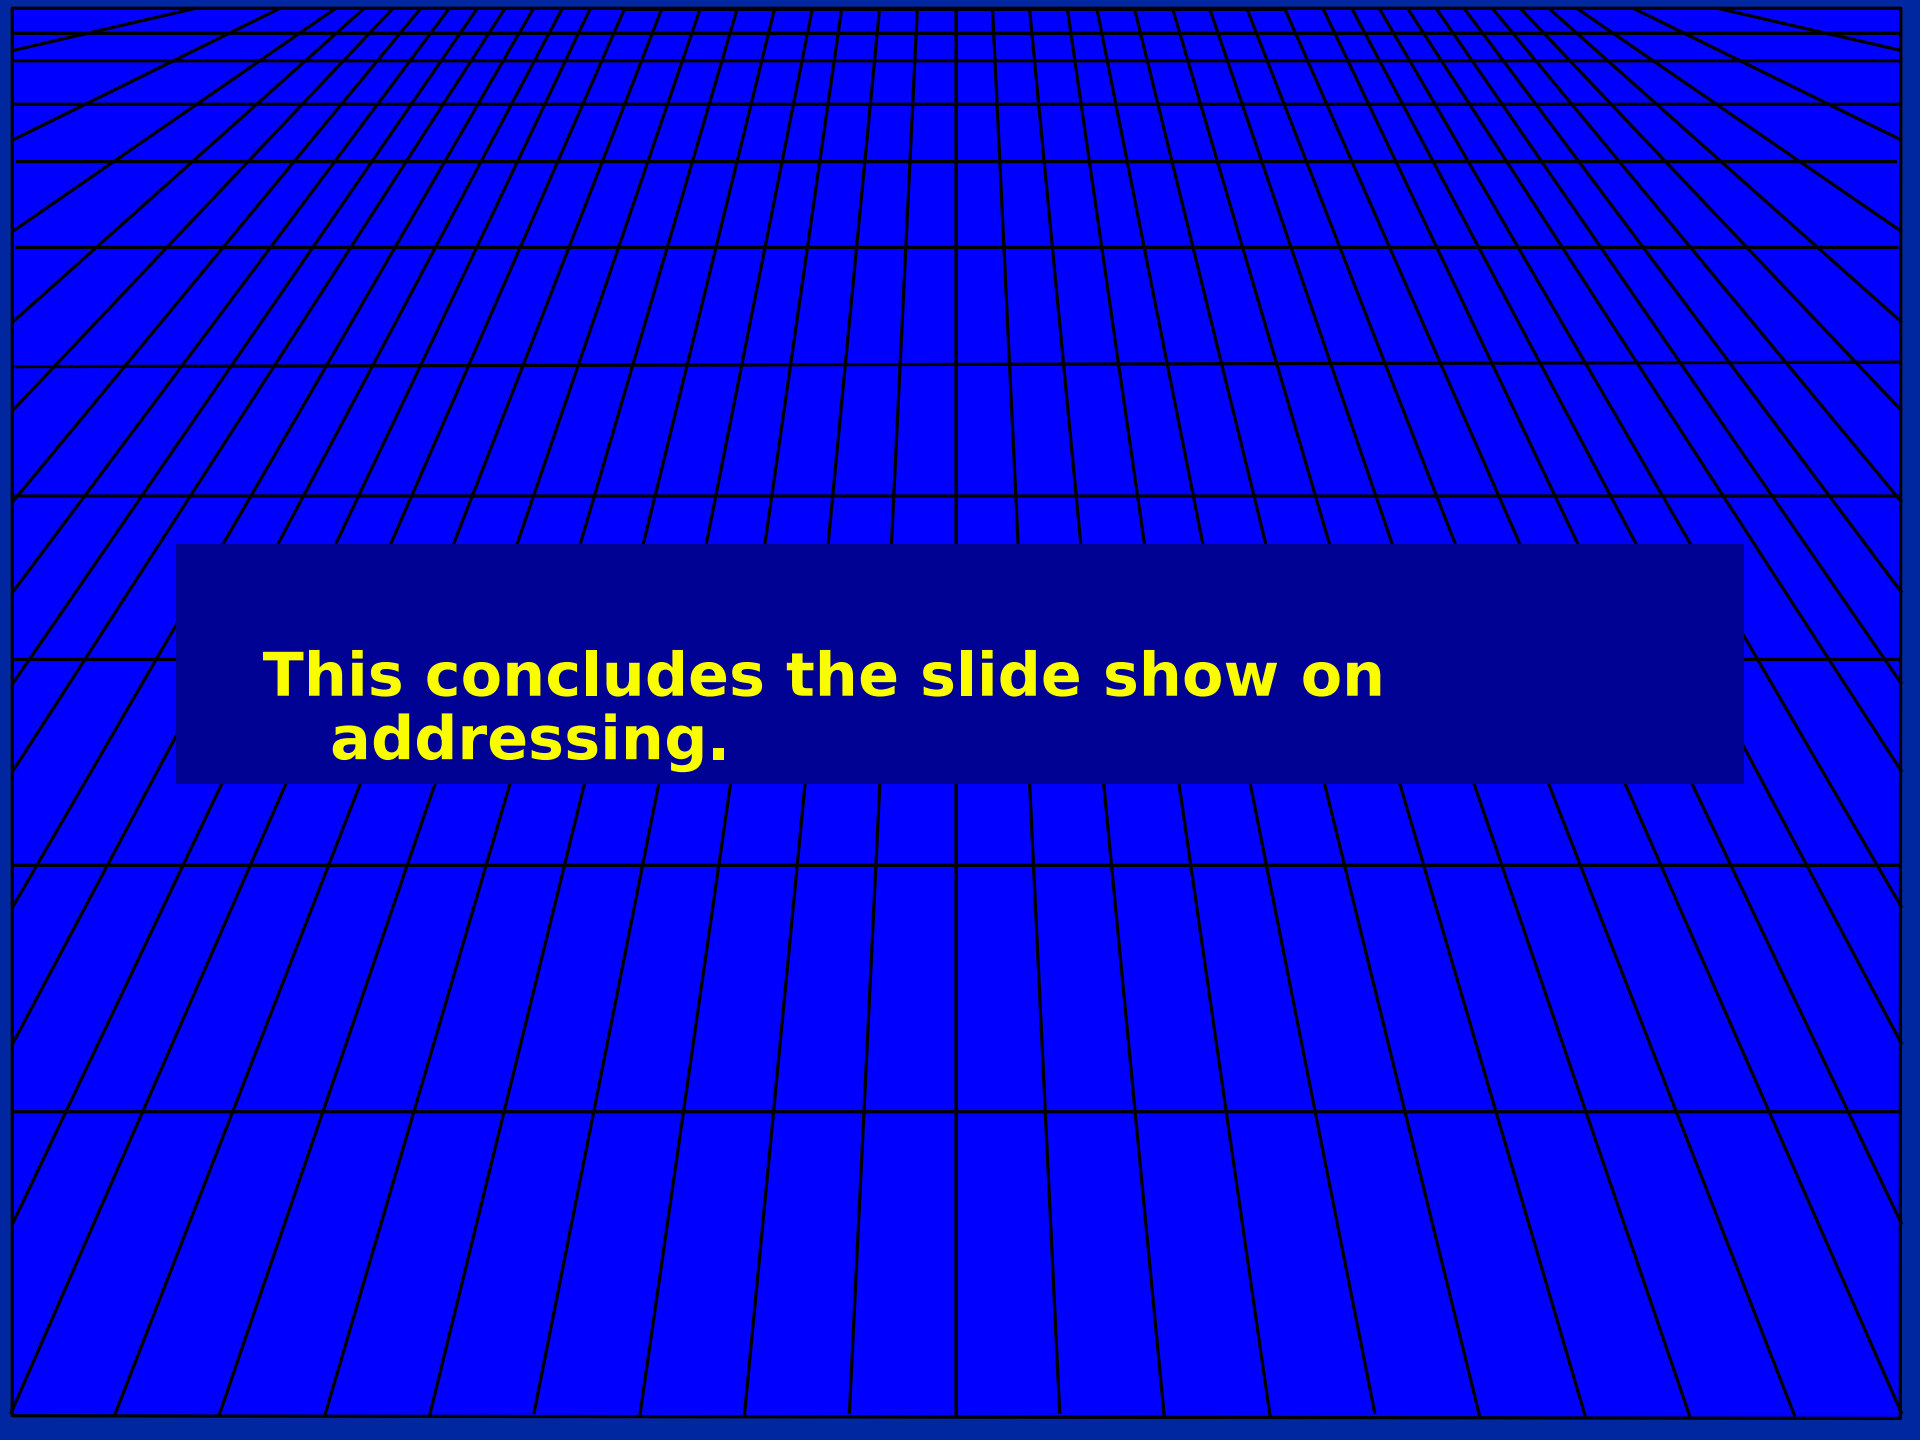

☒ **Handwritten addresses are
NOT automation compatible**

Now you know what the USPS standardized format looks like and understand WHY . . .

- It is important to address mail using the standardized format prescribed by the US Postal Service.**
- It is important to make sure the address is accurate.**

The background of the slide is a solid blue color with a black grid pattern. The grid consists of horizontal and vertical lines that create a perspective effect, with the lines converging towards the top of the slide.

**This concludes the slide show on
addressing.**
